Up Club member journey - WIP Future

Start or end of the journey

Key activity

Decision

HubSpot touchpoint - kept in sync by zaps today

Automated today

New automation - to build

1 - ACQUISITION

Prospect discovers Up Club

Join the waitlist - Typeform and £30 deposit

New contact created in HubSpot - On the waitlist

Deposit paid?

direct

Direct route (no waitlist): some join straight from the website - pay the full price deposit, then go to the Memberspace account creation link.

website entry

Yes - pays

2 - ONBOARDING

Membership activated - Memberspace and Stripe

Knowledge Bot for Team to get info on the member base. Liv to decide UX and house for this.

HubSpot updated by zaps - tagged Member

Weekly and monthly reporting runs itself from here (when HubSpot data is source of truth) - Apps script to updat ethe sheet and give dashboard

Welcome and onboarding - call, gift, Up Talk invite

engagement back to HubSpot record

3 - MEMBERSHIP

Slack bot (notion driven) for the community to find information based on RAG content

Member engages - events, Slack, content, connections

Member Health - Agent analysis hubspot to score on email, webinar, slack activity and scores - stores back into hubspot field

Still a member?

no - cancels

Cancels/ pause - Memberspace and Stripe updated

zaps

HubSpot updated by zaps - Cancelled or Paused

Report and Dashboard

What one source of truth unlocks

Foundation - what the clean and rebuild deliver

HubSpot - the source of truth

Everything flows from the truth

THE FOUNDATIONS

One contact per person - duplicates merged

Stable IDs: Memberspace + Stripe on every contact

Live zaps keep status and cancellations current

Engagement signals land monthly: email, events, Slack

HUBSPOT - the source of truth every tool reads

1. AUTOMATED REPORTING

AppScript fills the weekly and monthly sheet itself

Counts, churn and growth you can defend

2. KNOWLEDGE HUB

One live profile per member: role, industry, strengths, LinkedIn

Who is X, who should meet whom - answered in seconds

3. CLAUDE WORKFLOWS

Weekly health score and flag on every member

Onboarding watch and at-risk alerts to the team

Monthly identity check catches drift in days

4. GENUINELY AI-READY

Segments and comms driven by true status and type

Slack bot and every future AI tool plugs into one clean record

Fix the data once, and every future tool inherits the truth.

The agentic engine - Claude runs it, HubSpot is the brain

HubSpot - the brain (single source of truth)

Claude - the AI engine

An agent Claude runs (to build)

Notion library - the RAG content store

THE BRAIN AND THE ENGINE

HubSpot - the brain. Every member, status, segment and history in one place. The single source of truth.

reads and writes

Claude - the AI engine. Reads and writes HubSpot, builds the library, and answers the team and members.

builds

WHAT CLAUDE RUNS

Notion library - community and forum content (RAG)

reads

Member Health agent. Scores each member's health and engagement from their activity.

writes

Health and engagement score written to a HubSpot field.

Team Knowledge Bot (internal). Reads HubSpot and answers the team's questions about the member base, by segment.

The team - answered on demand.

Community Slack bot. Answers members in Slack from the Notion library (RAG over community and forum content).

Members - answered in Slack.

Reporting. Weekly and monthly packs build themselves once HubSpot is the source of truth.

Weekly and monthly reporting pack.

One brain, one engine. HubSpot holds the truth, Claude reads and writes it, and every agent works from the same record.

Foundation status after the clean-up, corrected bot architecture, and the commercial layer

FOUNDATION ROW - STATUS 15 JULY

DONE - One contact per person: 54 of 60 merges verified via API, rest queued

READY AT GO - Stable IDs on every contact: 1,003 Memberspace IDs + 997 Stripe wallets incl. 43 traced through company cards

HALF - Zaps: cancel + past-due flows PROVEN live. Gap: pause workflow + rebuild on IDs (use Stripe description = Memberspace name as join key)

NOT BUILT - Engagement signals (email, events, Slack props). Gates the Member Health Agent

COMMUNITY SLACK BOT CONTENT PIPELINE (bot is LIVE on Railway - not 'to build')

CONTENT HUB - community and forum content lives here → MANUAL SELECTION - human picks what goes in → CLAUDE TAGS IT - into the Notion database structure → HUMAN REVIEW - approval before any new content is included → NOTION DB feeds the LIVE Slack bot (RAG answers to members)

Notion is NOT a raw feed: content is curated from the hub, Claude does the tagging, a human approves. Nothing enters the bot's knowledge without review.

UP CLUB MEMBER KNOWLEDGE BOT - INTERNAL ONLY

Lives in a private Slack channel FOR UP CLUB EMPLOYEES ONLY. Reads clean HubSpot (IDs, status, tier, health). Answers 'who is X', 'who should we connect', 'show me at-risk Big Up members'. Never member-facing.

NEW 5TH PILLAR: THE COMMERCIAL LAYER (what the clean data found)

LEAK LEDGER - GBP 20k+/yr of paused or voided billing now visible, every case owned (Liv verdicts)

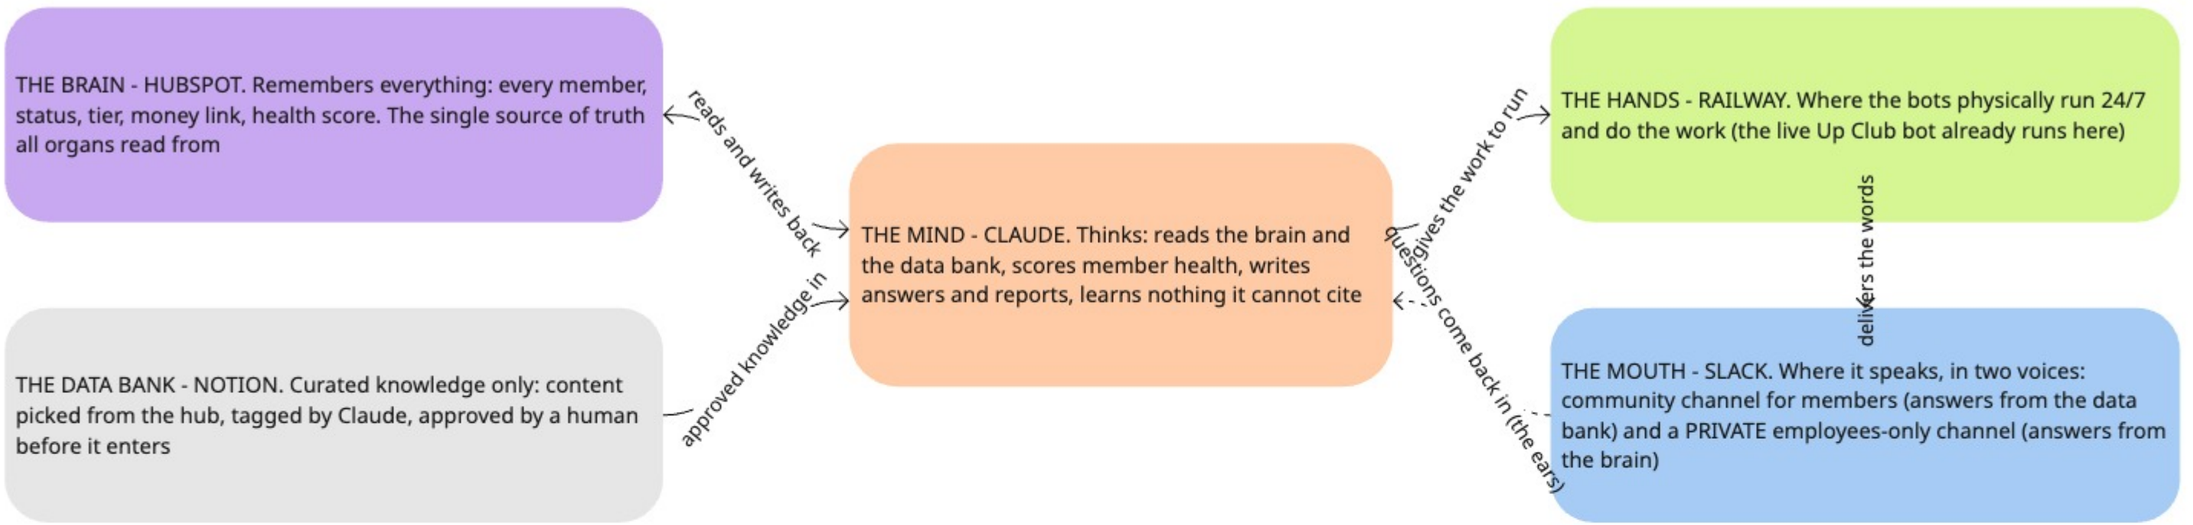

WIN-BACK - 2,771 catalogued ex-members with leave reasons logged. 3% reactivation = GBP 15-20k/yr

CORPORATE SEATS - InMotion, Saputo, gupuds, Vypr, Storal already buy team memberships ad hoc. Package it as a B2B product

BIG UP ESCALATOR - 90 members, zero current churn. Health data doubles as the upgrade qualification list

Fix the data once and every future tool inherits the truth - foundation is now 75% real, 90% at Go. D13 (Zap owner + pause workflow) is the most strategic item on the list.

One body: HubSpot remembers, Notion knows, Claude thinks, Railway does, Slack speaks

RULE 1 - The mouth only speaks what the brain knows or a human approved into the data bank. No improvising

RULE 2 - Member-facing voice and employee-only voice never mix. Member data stays in the private channel

RULE 3 - The mind writes its findings back to the brain, so the whole body gets smarter in one place

Agents from the original diagram map onto this body: Reporting Agent + Health Agent = mind exercises. Knowledge Bot + Community Bot = the two voices of the mouth, running on the hands

Body status today: brain cleaned (this week), data bank pipeline agreed, hands already running, mouth half-live. Missing: the nervous system - D13 Zaps + engagement signals
